## SERVICE BULLETIN

**Date:** April 26, 2011

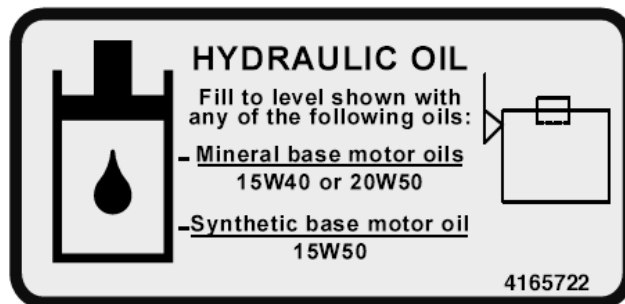

**Bulletin No:** JC-005-11

### **Hydraulic Oil Level**

**Issue:** Hydraulic whining on new G series ProCat and Predator-Pro (separate pump & wheel motor units).

**Cause:** Oil level in hydraulic reservoir on some early production models was low. We have found in our assembly process that the hydraulic system was not being filled or topped off at the recommended level. We have implemented appropriate practice in assembly to ensure the proper oil level is reached.

**Action Required:** During the setup process please check the oil level and if needed, fill to the recommended level, which is just below the bottom of the fill tube.

**NOTE:** This larger tank makes it look like you are near the fill tube when in reality you are 1-2 quarts low. The capacity of the complete dry system is 8 quarts. The capacity of just the tank for an oil change is 5.5 to 5.75 quarts.

#### **Products involved:**

MODEL	DESCRIPTION	UP TO SERIAL
942500G	BC PROCAT 22HP KAW W/52 SD	00365

**Warranty:** Oil level check for the engine and hydraulics is a normal part of set-up and routine service. However; if you find the system takes a quart or two to bring it up to full, we will compensate for the additional oil. File a **Labor Only** claim using WarrantySmart and select "JC-005-11" from the labor drop down box. This will allow .2hrs which should be more than enough to cover any oil that may have been required (do not enter oil as a separate entry on the claim). "Admin Fee" will not apply. Note: These units are shipped with 15W40 mineral base oil in them. You do not need to add Synthetic oil.

If you have any questions, please contact the Schiller Grounds Care Customer Service Department at 920-699-2000.

This bulletin is relevant to the departments checked below. Please circulate as appropriate.
