Service Bulletin

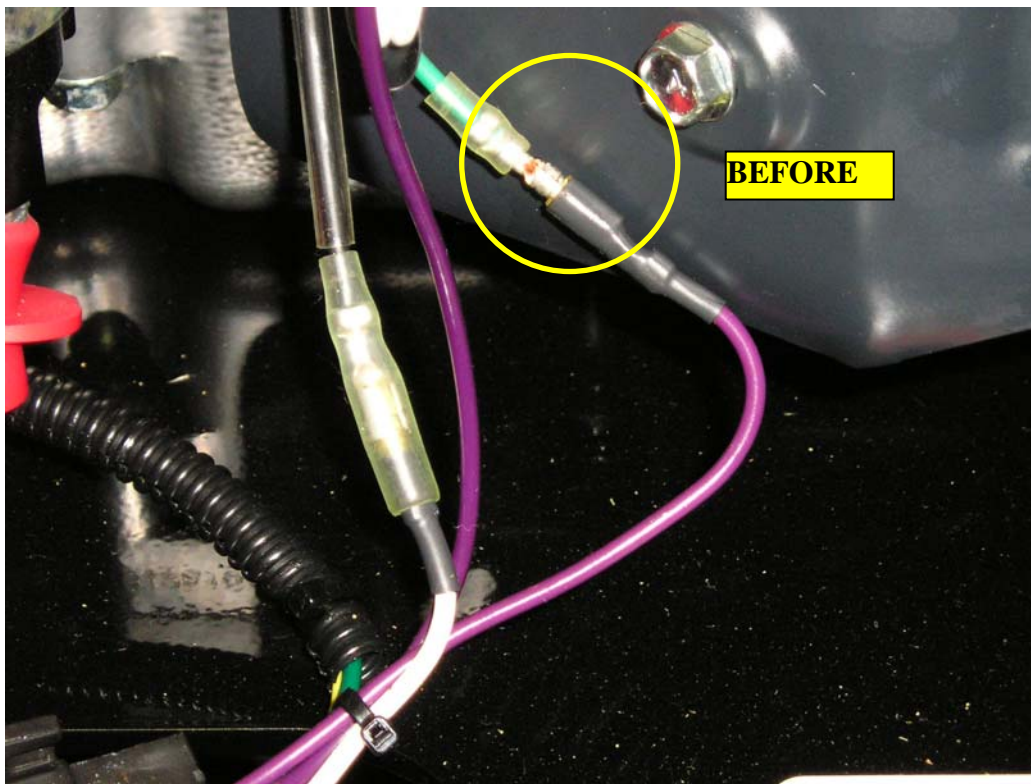

October 8, 2010

Bulletin No: JC-016-10

Issue: Engine shuts down immediately and will not restart

Cause: Wiring harnesses were manufactured without the required boot over the female spade on the (purple) wire to the carburetor solenoid. This exposed connection can touch ground, blowing the fuse on the charge circuit (purple wire fuse holder). The solenoid then shuts off all fuel supply to the engine causing unit to shut down, and not re-start.

Action Required: Pull the wire apart at the connection, slip a 2 inch piece of heat shrink tubing over the wire, reconnect the wire, slide the heat shrink tubing over the connection and heat it to shrink it in place. Replace fuse.
